# "Secure By Default"

NEW Cyber Security feature for IDIS NVRs

NEW FEATURE

A NEW feature has been added to the **DR-65xx** and **DR-85xx** IDIS Network Video Recorders from firmware release v8.1.0 onwards to the NVR's initialisation screen regarding Remote Access - refer below.

To continue, you must select one of the 2 available options, **YES** or **NO**.

IMPORTANT NOTE:

Selecting YES - allows the WAN Port (Network Client) to communicate to all LAN and WAN connections as normal.

Selecting NO - internal firewall rules will be activated as per screen shot below. The firewall rules below block all incoming and some outgoing traffic of the WAN port.
