Dell APEX Cloud Platform for Azure

Microsoft Premier Turnkey Azure Stack HCI Solution with Dell's automated management & orchestration software

APEX Cloud Platform for Azure is a on-premises infrastructure platform that is collaboratively engineered with Microsoft to extend and optimize the Azure hybrid cloud experience paired with Dell's automated management and orchestration software.

It brings the simplicity of Azure operations on-prem and to the edge, and delivers a consistent Azure experience across all IT environments. The platform helps to accelerate productivity by delivering familiar developer experiences across locations and by optimizing delivery of Azure Kubernetes Services and Azure Arc-enabled services.

And it helps mitigate potential security and compliance risks by enforcing consistent Azure management and governance services from cloud to edge.

Dell PowerFlex

Software-defined infrastructure for maximum agility, performance, and scale.

Dell PowerFlex combines block storage, file storage, and compute in a singularly-managed integrated platform with unparalleled performance and extensive scalability. PowerFlex easily handles environments that include multiple hypervisors, bare-metal OSs, and/or container management platforms, making it ideal for consolidating heterogeneous environments. Dell PowerFlex software-defined storage platform is designed to significantly reduce operational complexity and empower organizations to move faster by delivering flexibility, elasticity, and simplicity with predictable performance and resiliency at scale. PowerFlex provides a robust foundation that combines compute as well as high performance storage resources in a managed unified fabric. PowerFlex enables disaggregated (two-layer), HCI (single-layer), or mixed architectures with support for heterogeneous environments ranging from bare-metal workloads and virtual machines, to cloud-native containerized applications. PowerFlex supports all major hyperscaler platforms, including AWS EKS Anywhere, Google Cloud Anthos and Azure Arc-enabled Kubernetes. Customers can simplify multicloud operations across multiple hyperscaler cloud platforms with a unified on-premises infrastructure.
