SERVER & STORAGE CONFIGURATION SERVICES

You can save time and money by outsourcing server assembly and staging.

Dicker Data server and storage configuration services can include the integration of components, the latest updates and firmware for your server, and OS load. This can significantly cut installation time, minimise the risk of DOA hardware and reduce the need for waste disposal and cardboard clutter. Your engineering resources will have more time to focus on the complex technical tasks of the project.

Leveraging our staging services adds immediate capacity to your business. Our pre-scoped, fixed priced services are easily consumed and ordered. Alternatively, the scope can be customised dependent on your specific requirements.

Our server configuration services range from hardware integration and DOA testing through to firmware updates, RAID configuration and installation of operating systems, hypervisors and virtual machines. These services are offered across all vendors. We invite you to meet our team and have a tour of our facilities.

SPEEDY DEPLOYMENT

You will reduce your operational costs and the time it takes to deliver to your Customer. This frees up your internal resources to focus on other tasks.
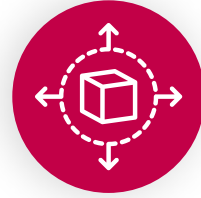

MINIMISE RISK OF DOA

We power on devices to minimise DOA upon arrival at site.

EXPAND CAPABILITIES

By leveraging our staging, you can increase your range of services and provide more value to your Customers without needing to invest in fixed resources.

SCALE UP YOUR OPERATIONS

We provide you with the ability to respond to large tender requests. From item level customisation through to the rollout of thousands of devices.
