

THIRD-PARTY LOGISTICS AND STORAGE SERVICES

Add scalability to your operations with Dicker Data Services Third-Party Logistics.

Dicker Data Services provides a third-party logistics and storage facility, which can be leveraged by our customers to support their clients. Dicker Data operates from a dedicated warehouse with multi-layer security that has been designed from the ground up to store IT equipment. We have invested significant capital in resources, systems, and facilities to support MSPs across the industry.

As a third-party logistics provider our key asset is our resources; the people on the ground who make it work. A key metric in the success of a project is the experience of the assigned project coordinator, and we believe we have the best in the business. Our project coordination team works with our partners in creating a unified customer outcome.

This process is managed by a dedicated WMS (Warehouse Management System), customised to manage projects, inventory, and provide real-time project data. With API driven systems integration, manual processes can be automated, reducing the workload of your internal resources and minimising the potential for errors. Customisable reports can be designed to meet your specific requirements, ranging from status changes on incoming and outgoing inventory, and detailed stock reports. In addition, more advanced automated notifications can be provided on select activity including daily dispatch reports, and end-user dispatch alerts.

Our project coordination team enable customers to benefit from our experience. We have the knowledge and systems to support your third-party logistics and storage needs.

Please reach out to our Services Team to arrange an onsite tour or to discuss your project requirements:
